Email: ham@hamcodes.com

PROFESSIONAL PROFILE

Security-focused engineer with hands-on experience in web application security, API testing, Linux systems, cloud fundamentals, automation, and secure infrastructure practices. Experienced in vulnerability assessment, security research, Docker environments, and scripting for security workflows. Strong self-driven learner with a builder mindset, combining offensive security knowledge with practical problem-solving and security-focused development practices.

EDUCATION

Kyambogo University	Bachelor of Education	(2010–2014)
Bridge Education Group	Master of TEFL / TESOL	(2019)

SECURITY & INFRASTRUCTURE

- **Web Application Security** – OWASP Top 10, API Security Testing, Authentication & Authorization Testing
- **Infrastructure Security** – Linux Systems, Networking Fundamentals, Docker & Container Security
- **Cloud Fundamentals** – AWS / Azure / Google Cloud Fundamentals
- **Security Automation** – Python, Bash, Google Apps Script
- **Dev & Deployment** – GitHub, CI/CD exposure, Web Deployment, MySQL, NodeJS
- **Networking** – TCP/IP, DNS, VPN Fundamentals
- **Security Labs** – Active Directory Labs, Virtual Machines, Home Lab Testing Environments
- **Security Research** – PortSwigger Labs, TryHackMe, Hack The Box

TECHNICAL SKILLS

- **Programming & Scripting** : Python, Bash, JavaScript, SQL, Google Apps Script
- **Security** : Web Application Security, API Security Testing, Vulnerability Assessment, OWASP Top 10, Security Reporting
- **Infrastructure & Cloud** : Linux, Docker, Active Directory, Networking Fundamentals, Virtual Machines, AWS, Google Cloud, Azure
- **Development & Tools** : GitHub, VS Code, Web Development, REST APIs, Docker Containers
- **Security Platforms & Lab** : PortSwigger, TryHackMe, Hack The Box, APIsec University Labs

PROFESSIONAL EXPERIENCE

Security & Technology Educator / Independent Security Researcher

Present

- International & Private Schools - Vietnam/Saudi/online
- Conducted web application and API security testing using OWASP methodologies and security labs.
- Built and maintained virtualized home lab environments using Linux, Docker, Active Directory, and virtual machines for security research and testing.
- Developed and deployed web applications and backend systems using PHP, Python, JavaScript, and SQL.
- Worked with GitHub deployments, cloud fundamentals, automation workflows, and containerized environments.
- Researched vulnerability assessment methodologies, authentication systems, web application risks, and secure infrastructure practices.

Developed STEAM curricula robotics kits, Coding programs, 3D and cybersecurity learning resources for schools and learning centres

CERTIFICATIONS

- **TCM-Security** - Practical Ethical Hacking
- **APIsec University** - API Security offsec
- **TryHackMe** - Cybersecurity Labs
- **HacktheBox**
- **Google/AWS/Azure /Oracle** - Cloud security Fundamentals
- **The ODIN project** - Fullstack Web Dev

PROFESSIONAL STRENGTHS

Founder & STEAM Educator – www.hamcodes.com

- Produced security-focused technical content and cybersecurity awareness resources through Hamcodes platforms.
- EdTech Tools : Moodle, Canva, Onshape, OpenSCAD, HPROBOT BLOCKLY, Blender, ThinkCAD, Scratch, AI-agents

Dear Hiring Team,

I'm excited to apply for the Security Engineer position at Kaedim.

After going through the role details, team profiles, engineering culture, and technical direction of the company, I felt strongly aligned with the type of environment and challenges you are building around. The combination of product security, infrastructure security, automation, and ownership in a fast-moving team is exactly the direction I want to continue growing in professionally.

My background combines hands-on web application security, API testing, scripting, Linux systems, cloud fundamentals, and practical security research. Over the past several years, I have independently built home lab environments using virtual machines, Docker containers, Active Directory, and web application testing platforms to deepen my understanding of offensive and defensive security practices.

I have experience working with OWASP methodologies, API security concepts, vulnerability assessment workflows, and secure development practices through continuous self-driven learning, labs, and technical projects. Alongside security, I also have practical experience with Python, Bash, JavaScript, SQL, GitHub deployments, and cloud platforms including AWS, Google Cloud, Oracle and Azure fundamentals.

What particularly interests me about Kaedim is the opportunity to contribute beyond a narrow security function. I enjoy building systems, solving problems independently, improving workflows, and working closely with engineering teams to strengthen security without slowing down innovation. The startup environment and ownership-focused culture described in the role are especially appealing to me.

In addition to technical work, my experience working internationally in education and technology has strengthened my communication skills, adaptability, and ability to explain technical concepts clearly to both technical and non-technical audiences. I believe this would also help when contributing to security awareness, operational processes, and cross-team collaboration within Kaedim.

I am highly motivated to continue developing as a security engineer and would welcome the opportunity to contribute to Kaedim's security infrastructure, product security efforts, and long-term security culture.

Thank you for your time and consideration. I look forward to the opportunity to speak further.

Best regards,

Kayemba Hamiidu
